Objectives

I am a current junior at Keene State College studying Manufacturing Engineering & Product Design. I am currently seeking opportunities for the summer of 2026. I'm a great problem solver who works well in a highly collaborative environment, perpetually curious and always looking for my next challenge. I not only possess the engineering knowledge required to design robust, well-rounded products, but also have hands-on experience in CAD design, rapid prototyping, and various manufacturing processes. These skills allow me to bring designs to life whilst prioritizing real world manufacturability.

Education

Keene State College: Junior GPA 3.78 Expected Graduation December 2026

Major: **Sustainable Product Design & Manufacturing Engineering B.S**

Technical Skills

Engineering Design & CAD • SolidWorks (CSWA & CSWP Certified) • Design of parts and mechanical assemblies • Tolerance specification for fabrication • Engineering simulations Rapid Prototyping & Fabrication • Design for 3D printing (CAD and slicers) • Knowledge of BOSS / ULS Co2 laser cutter systems • CNC Mill and Lathe Experience • Casting Experience (Mold Design & Production of Parts) • Knowledge of materials, manufacturing processes, and testing methods	Sustainability • Sustainability analysis using the Sustainable Minds platform • Hands-on experience with sustainable product design principles Software & Data Analysis • Adobe Creative Suite (Photoshop, Illustrator) • Microsoft Office (PowerPoint, Word , Excel) • Statistical data analysis using Excel • MATLAB
---	--

Projects

Tablet Stand Design Project (SOLIDWORKS Simulations) Conducted SolidWorks simulations to analyze applied forces and determine necessary design modifications, final Materials, and final manufacturing processes. Mechatronics Organization System Project Created a system of modular storage containers that combine to store electronic components effectively and efficiently while still allowing for portability Conducted user research / Interviews to determine user needs and design requirements	Lamp Design Project Made use of sustainably sourced materials to design and construct a desktop lamp Integration of electronic systems into products Ergonomic Handle Project Designed a better saw handle for use in cold environments where gloves are required Improved upon existing handle design taking ergonomic principles into account Interlocking blocks CNC / SolidCAM Programed Haas MiniMill via SolidCAM to produce a set of two interlocking blocks while accounting for all required tolerances and final part finish.
--	---

Work Experience

Keene State / NH Lift (Otom Project)

Research Assistant 2026

- Worked with entrepreneurs to design and prototype a new action camera system
- Developed on device control and communication software with linux and python
- Made all electronic component design decisions for camera unit prototypes
- Conducted rapid prototyping to bring product from TRL1 to TRL3

Ben Franklin Inc.

Assistant Manager 2022-2023

- Supported daily store operations and staff management
- Responsible for closings, openings, inventory, and customer service
- Conducted training for new employees

Ben Franklin Inc.

Cashier 2020-2022

- Provided customer service and handled transactions accurately
- Maintained organized and efficient point-of-sale operation

Campus Involvement

Society of Manufacturing Engineers / Sustainable Product Design & Innovation Club
